Problem Set #4

Problem set #4 is to write a 2-3 paragraph proposal for your class project. Please provide a title, some scientific background about the location you intend to investigate, describe what data you will use in your analysis, and the kind of analysis you will perform.

Once your proposal is written you will set a time this week to meet with me individually and discuss your project. This will be an opportunity for me to provide constructive feedback on your idea and help you locate the resources you will need to succeed in your project.
