
What if sea level becomes unstable again?

The threats and challenges for humanity would be enormous.

The potential threats:

- UN Development Program, 2008:
  332 million people in low-laying coastal zone
- Single disaster estimates: > $ 100 billion;
- World Bank, 2008:
  * Disasters in two megacities in Asia could offset 20 years of global economic growth.

uninhabitable and asked for help in evacuating its population.

- The President of the Maldives, an island in the Pacific, has asked the population to start saving money for buying a new country when the island nation soon is being completely devoured by the rising sea and the evacuation of the whole population of 300,000 is the only option for survival
